

The TRCO Communication Framework

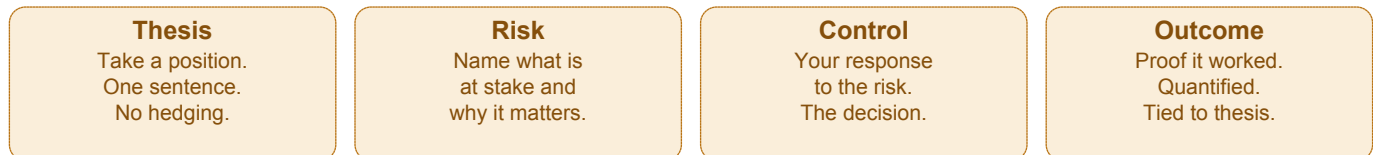

Clear thinking to structured communication

Today, Real Conversations Create Outcome

What is TRCO?

Most frameworks start with a story. TRCO starts with a position. That shift moves you from narrator to consultant. No story required. Works for any question type, any domain, any audience.

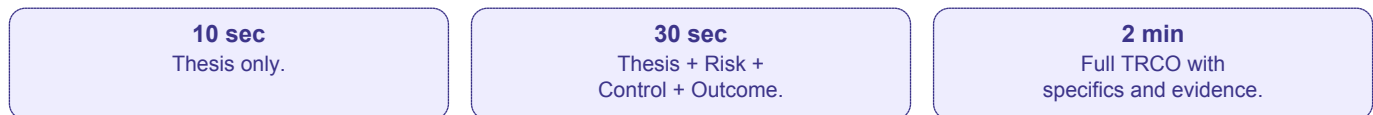

The Four Pillars

How to Apply

- Behavioral:** Open with Thesis as a claim. Let the story prove it. Close Outcome back to the claim.
Situational: Open with Thesis as your position. Risk is what breaks without it. Control is your response.
Executive: Thesis replaces agenda. Risk replaces background. Control replaces recommendations.
Any domain: Every field has a thesis, a risk, a control, and an outcome. The structure is universal.

The Three Tiers

The Thinking Layer

TRCO is the communication layer. Clear speaking requires clear thinking first. Before you speak, pair TRCO with a structured thinking framework for your domain. TRCO is the output. Your domain thinking framework is the engine.

The mapping below shows how each TRCO pillar connects to its corresponding source in the **5W Security Framework**. See github.com/adammckinski/5w-security-framework.

*"If the world is your stage and people are your critics, your job is not to please everyone.
It is to communicate your position so clearly they have to take you seriously."*
